manuel.latorre11@gmail.com

My experience spans both Frontend and Backend, allowing me to offer comprehensive solutions. In project creation, I prefer working with the MERN stack (MongoDB, Express, React, and Node.js) as the technological foundation. During my time at Henry Bootcamp, I worked on individual and group projects using agile methodologies such as SCRUM, and also developed skills such as active listening, proactivity, teamwork, and best practices.

EXPERIENCIE

Tu Mejor Amigo - Mexico

November 2023 - Current

Frontend Developer

Modality: Remote

I have significantly contributed to the development of an innovative dog-walking service application, focusing on creating intuitive and appealing user interfaces. My work has ranged from implementing essential functionalities for data management, using GET, POST, PUT, and DELETE requests, to ensuring smooth interaction with the application's database.

My biggest challengues:

- Integrate an effective notification system using React Native Firebase Cloud Messaging
- Added functionality that allowed users to upload images of their pets and also profile pictures through Cloudinary
- Manage the launch of the app in the Google Play Console, ensuring that the service was accessible to dog lovers looking for reliable walkers

Technologies used:

React Native, Typescript, Firebase Cloud Messaging, Cloudinary.

Generación Tech - Argentina **August 2023 - October 2023**

Frontend Developer

Modality: Remote

Generación Tech is a SPA (Single Page Application). This is a digital services agency, in which I have coded the design agreed upon by the design team. It features a responsive-design, intuitive user interface, and more.

My biggest challengues:

- Integrate through the Email Js library the option to communicate via email directly from the website

Technologies used:

HTML, CSS, Typescript, Next Js.

PROJECTS

Tech Shop API Repository | Website

February 2024

This is a website that offers a Rest API that features a plethora of tech products such as headsets, keyboards, consoles, and more. It also has a cart to store products and also with users. In the Docs section you will find all the information you need to consume the API since it has a complete CRUD (Create, Read, Update, Delete).

Technologies used:

HTML, Typescript, NextJs, Tailwind css, Next UI.

Tech Shop API Database Repository | Website

Noviembre 2023

Tech Shop API Database it is a database that has 3 models:

- Products: This model represents the products available in the store. Each product has properties such as name, description, price, category..

- Cart: This model manages the information of the users who use the application. Each user has properties such as name, email and password.

- Users: This model records the products that users add to their shopping cart. Each cart has properties such as the user ID, a list of products, and the quantity of each product.

The backend is developed with Express, which handles the routes and drivers for each CRUD operation. MongoDB is used as the database to store information persistently.

Technologies used:

Javascript, Express, MongoDB.

TECHNOLOGIES

HTML, CSS, Javascript, Typescript, React, Next Js, Redux, Tailwind css, Node Js, Express, Sequelize, MongoDB, PostgreSQL, Git, Github, Npm, Slack, Trello.

STUDIES

- Completed Highschool 2020.
- CoderHouse course Web Developer 2022.
- CoderHouse course Javascript 2022.
- Henry Bootcamp Fullstack Web Developer 2023.
- EFSET English Certification C1 Advanced.
